

POWER BI PROJECT REPORT

SPOTIFY 2023 MUSIC INSIGHTS

Name	Renu Lasya
UID	24BAI70210
Section	24NTTP-2A
Project	Spotify 2023 Music Insights
Tool	Microsoft Power BI Desktop

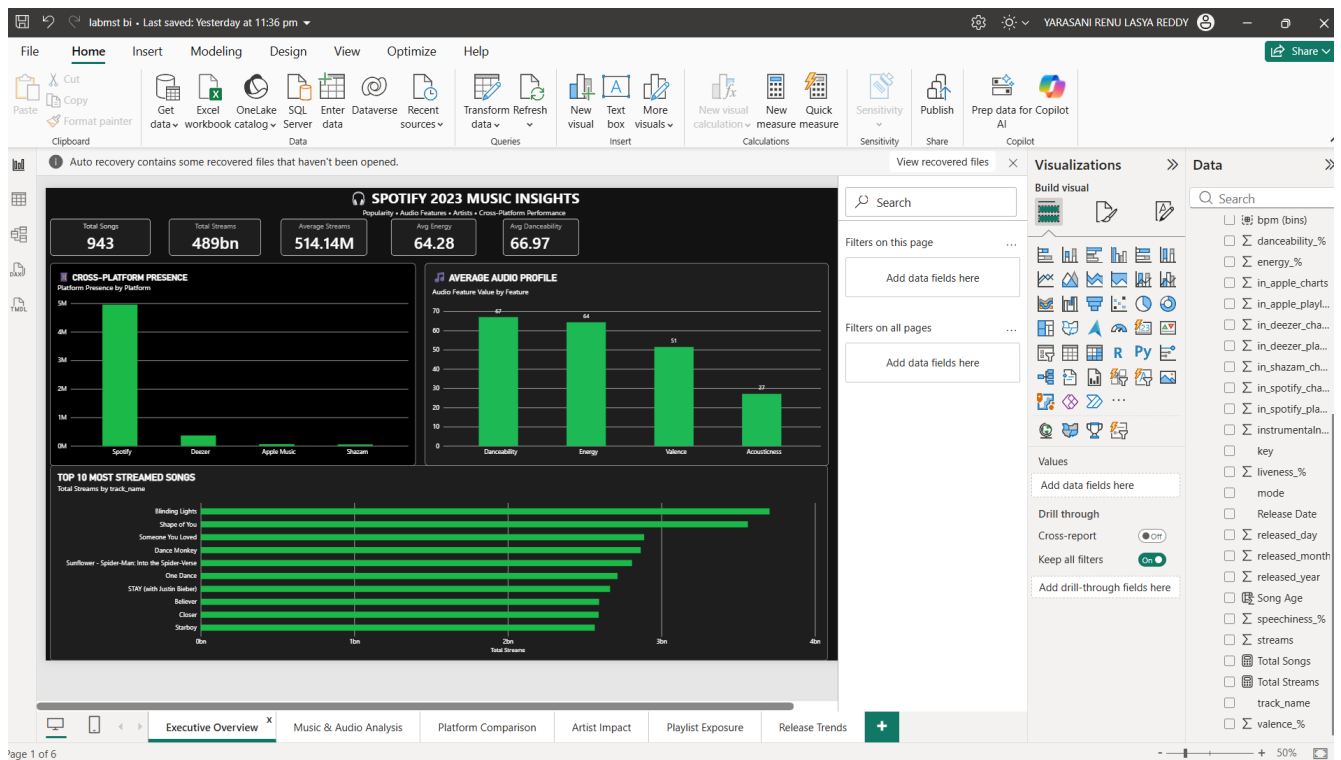

This report documents the completed six-page Power BI dashboard created from the Spotify 2023 dataset. The screenshots supplied for the project are included page by page.

Page 1 – Executive Overview

The Executive Overview summarizes the Spotify 2023 dataset using KPI cards, platform presence, average audio features, and the Top 10 most streamed songs.

Work shown in the screenshot:

- Total Songs, Total Streams, Average Streams, Avg Energy and Avg Danceability are displayed as KPI cards.
- Cross-Platform Presence compares Spotify, Deezer, Apple Music and Shazam.
- Average Audio Profile compares Danceability, Energy, Valence and Acousticness.
- Top 10 Most Streamed Songs presents the highest-streamed tracks.

Page 2 – Music & Audio Feature Analysis

This page analyzes the characteristics of popular Spotify songs through audio-feature relationships and distributions.

Work shown in the screenshot:

- Danceability vs Energy is shown as a bubble/scatter visual.
- Song Tempo Distribution shows song counts across BPM bins.
- Valence vs Streams compares valence with streaming performance.
- Acousticness Distribution shows the distribution of songs across acousticness levels.

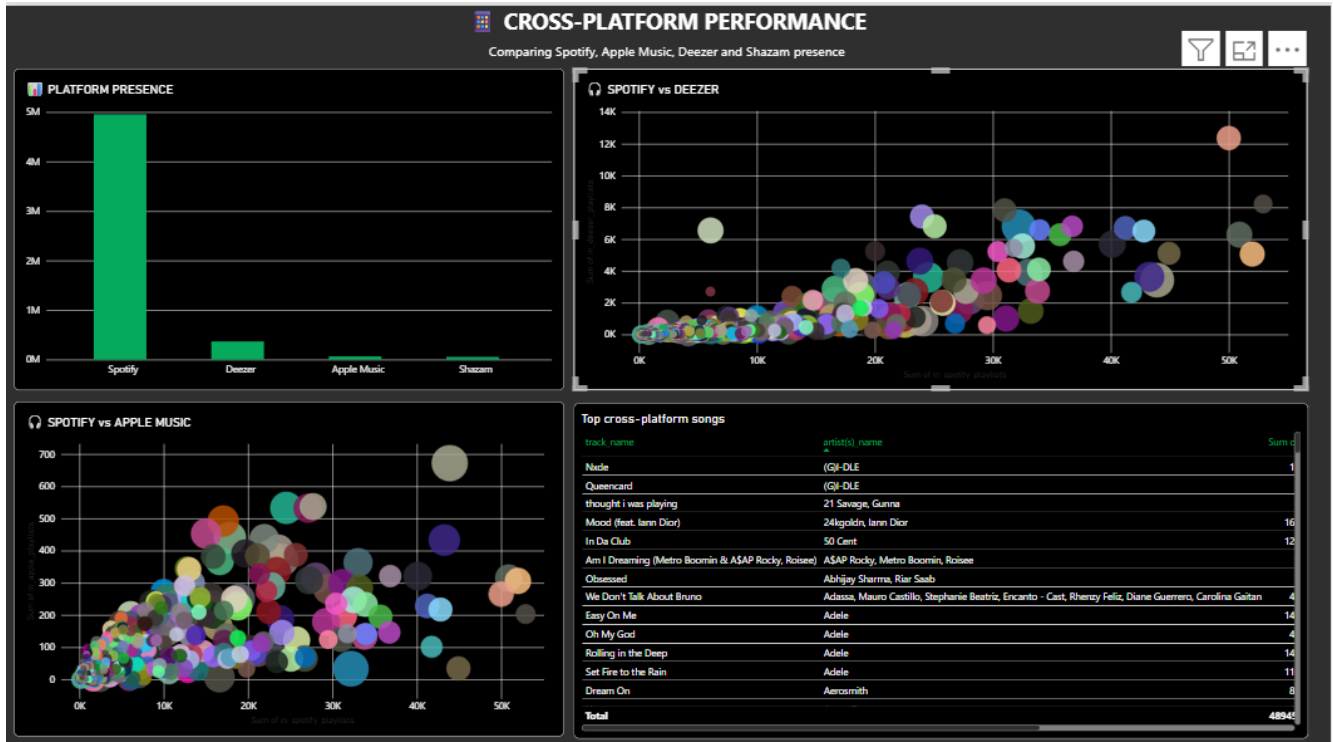

Page 3 – Cross-Platform Performance

This page compares Spotify, Apple Music, Deezer and Shazam presence and shows cross-platform song performance.

Work shown in the screenshot:

- Platform Presence compares the four platforms.
- Spotify vs Deezer and Spotify vs Apple Music use comparison scatter/bubble visuals.
- Top Cross-Platform Songs provides track, artist and stream information.

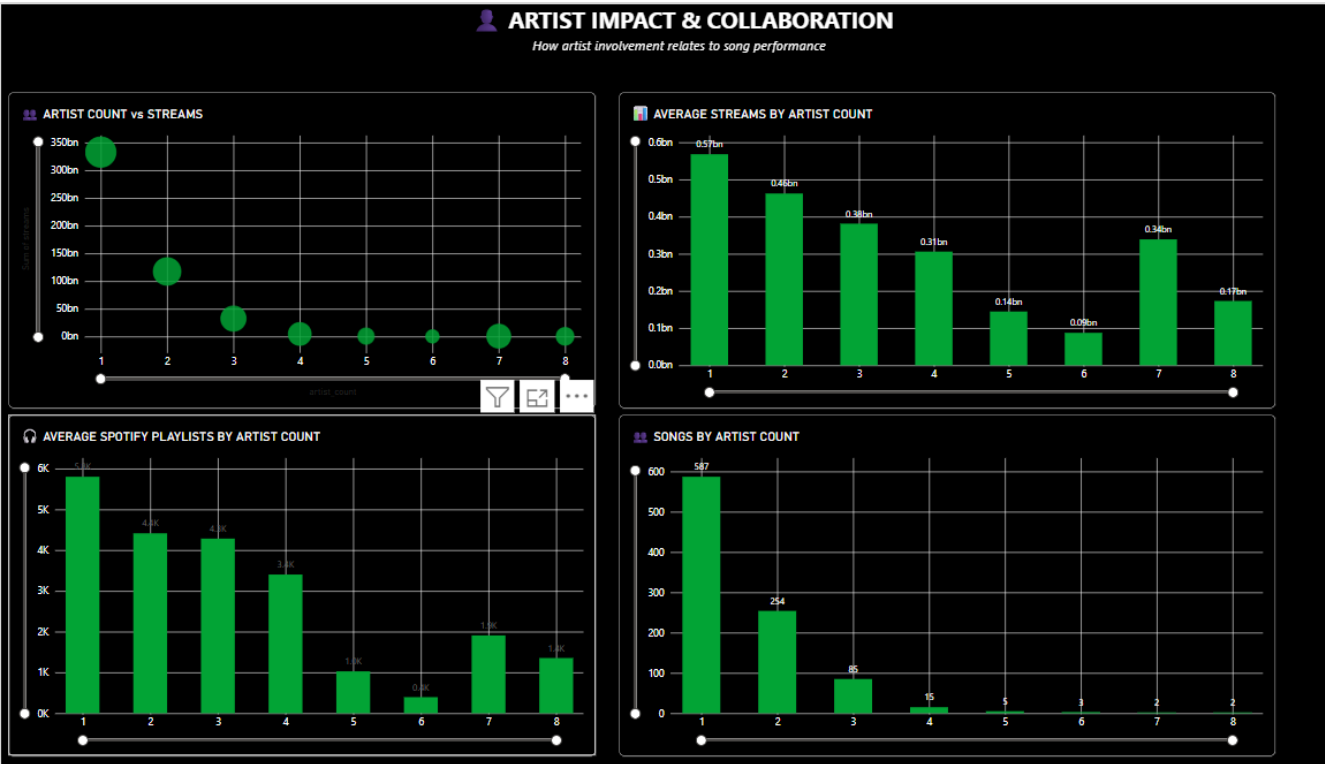

Page 4 – Artist Impact & Collaboration

This page examines how artist involvement relates to song performance, playlist exposure and the number of songs.

Work shown in the screenshot:

- Artist Count vs Streams shows the relationship between artist count and streams.
- Average Streams by Artist Count compares average streaming performance.
- Average Spotify Playlists by Artist Count compares playlist exposure.
- Songs by Artist Count shows the number of songs for each artist-count group.

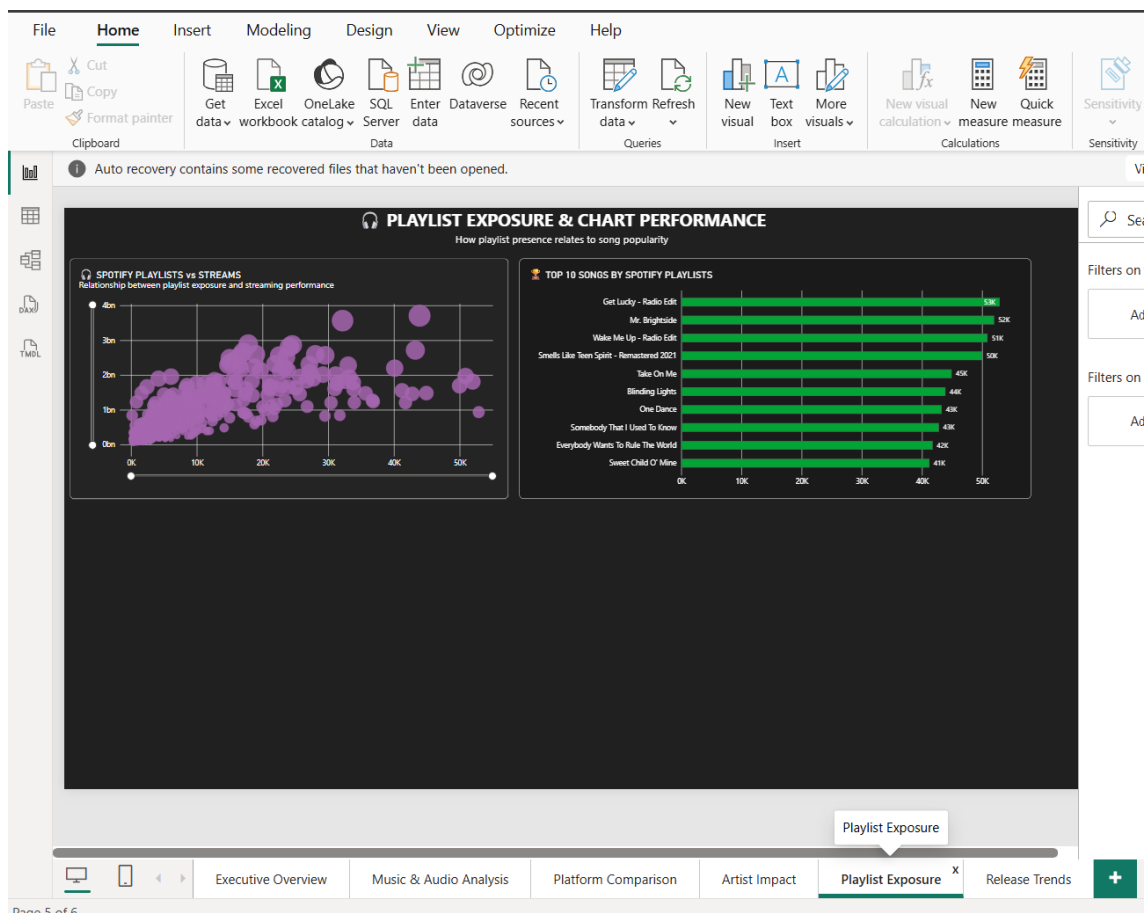

Page 5 – Playlist Exposure & Chart Performance

This page studies the relationship between Spotify playlist exposure and streaming performance.

Work shown in the screenshot:

- Spotify Playlists vs Streams shows playlist presence against streaming performance.
- Top 10 Songs by Spotify Playlists identifies songs with high playlist presence.

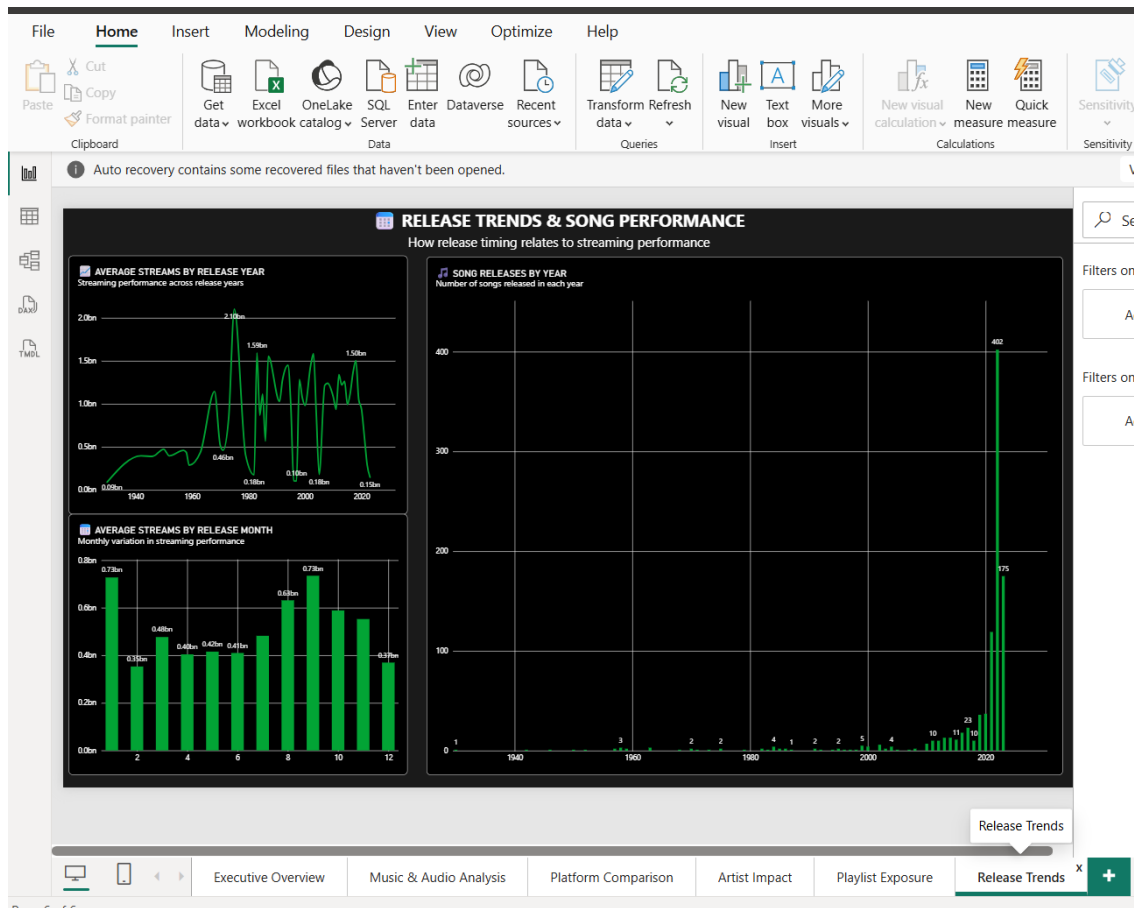

Page 6 – Release Trends & Song Performance

This page examines release timing and its relationship with streaming performance.

Work shown in the screenshot:

- Average Streams by Release Year shows streaming performance across release years.
- Song Releases by Year shows the number of songs released in each year.
- Average Streams by Release Month shows monthly variation in streaming performance.

Project Summary

The final Power BI project contains six analytical pages: Executive Overview, Music & Audio Feature Analysis, Cross-Platform Performance, Artist Impact & Collaboration, Playlist Exposure & Chart Performance, and Release Trends & Song Performance.

The dashboard uses KPI cards, bar charts, line charts, scatter/bubble charts and a table to present the Spotify 2023 data in a structured form.
